CEMSET™ CEMC™

Designed for secure implant fixation in
Cemented Hip Arthroplasty.

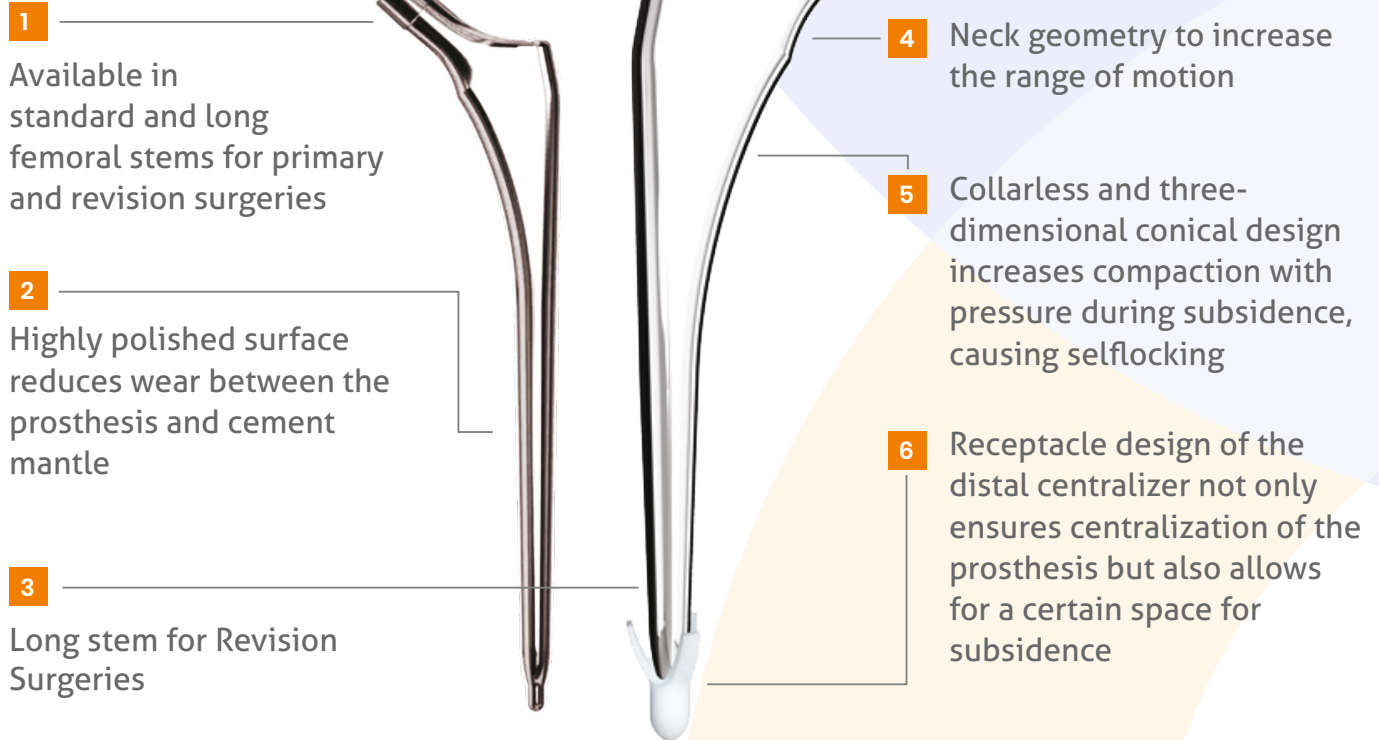

Fix with Confidence. Cement with Precision.

PERFORMANCE | STABILITY | PRECISION

CEMSET™ CEMENTED FEMORAL STEM

PERFORMANCE

- Highly polished and geometrically designed neck increases range of motion
- Superior mechanical strength enables accurate load-bearing

STABILITY

- Engineered for optimal natural subsidence enhances long term fixation of implant
- CEMSET forms a complete mantle around the prosthesis, reduces micro-movement and risk of loosening
- Made with CoCr Alloy that conforms to ISO5832-4 and GB17100 standards

PRECISION

- Distal centralizer not only ensures interposition of prosthesis in bone cement, but also provides certain space for the natural subsidence of femoral stem
- Three dimensional conical design helps in natural subsidence
